Your Green Electronic Waste Recycling Solution

Electronic Waste Recycling Solutions
 & Secure Data Destruction Services

“Environmental sustainability is one of the most important issues affecting our world. CEAR is continually improving and implementing the most environmentally cutting edge processing technology available and we are proud to remain on the forefront of recycling and global sustainability.” **Paul Gao** FOUNDER AND CEO

CEAR is the industry's solution for electronics recycling

CEAR is a technological leader in the electronic waste recycling industry and has been proudly providing service since the year 2000. Our client list includes major corporations, government agencies, small businesses and civic organizations. Our business began with a vision for environmental sustainability and electronic asset recovery. With the inception of California's Electronic Waste Recycling Act of 2003 and the global need for renewable resources, CEAR has transformed from a small operation to a leader in the recycling industry. We maintain an approximately 300,000 square foot compound just east of California's State Capitol and employ the most advanced e-waste processing technology in the United States.

CEAR is dedicated to managing environmental matters as an integral part of our business. We are committed to responsible, transparent management of all environmental issues and concerns. It is our policy to assure the environmental integrity of our operations and facilities at all times and in all places. We do so by adhering to the following principles, environmental stewardship, involvement and communication, continual improvement and compliance. Fully pledged to a "Zero Landfill" policy, CEAR manages all waste streams and ensures that end-of-life materials are processed with a commitment of compliance with all regulatory environmental requirements, preventing pollution and reducing environmental impact.

Paul Gao
PRESIDENT & CHIEF EXECUTIVE OFFICER

CEAR's Technologically Superior Processing Center

CEAR's technologically superior processing center provides unique advantages over traditional electronic waste processing methods. All end-of-life electronic waste is recycled utilizing a state-of-the-art centrifugal chain shredder, with the exception of CRT containing and mercury lamp containing electronic devices. Centrifugal chain shredding is the most environmentally responsible and economically beneficial solution for the recycling of materials found in end-of-life electronics.

After removing potentially hazardous components, non-CRT and non-mercury lamp containing e-waste is fed into the centrifugal chain shredder without any further dismantling. The shredder breaks down the electronic components into their individual parts in an integrated operational process with a capacity of 5 tons per hour. Through acceleration and collision energy, components are broken down into their original elements. Next, components are separated from one another by automated technologies: ferrous from non-ferrous, plastic from aluminum and other metals, copper and circuit boards are also segregated. From the most complex servers to simple plastic rich consumer electronics, each are automatically dismantled into separated recyclable materials.

Critical, environmentally responsible, characteristics of the centrifugal chain shredder include:

- reduced energy consumption
- more efficient separation of components
- cleaner output of base materials

The centrifugal shredding processing achieves unrivaled results in regard to environmental impact, processing efficiency and economic benefit and significantly improved output and environmental quality over conventional knife shredding processes.

Community Partners

Being an active part of the community is a critical aspect of our business. Many of our partners are non-profit organizations including youth groups, schools, churches and many other community organizations.

Through donations to community organizations who promote reuse, we encourage the sustainability of electronic products. If they are not capable of being resold or are considered end-of-life, we recycle the materials and share the revenues with the partner organization. Our activity throughout our community can be found on any given Saturday at our e-waste collection events. We hold over 250 events a year, making it very convenient for the community to recycle their e-waste and for CEAR to share revenue to support these civic organizations.

Our collection events are run so logistically efficient that CEAR has broken many records including holding the largest California collection event, resulting in over 880,000lbs of materials collected on a single day.

CEAR's recycling and data security expertise will help close the loop for your end-of-life electronic needs

In addition to electronics recycling, CEAR also offers secure data destruction services. Whether you have an entire data center or 35 hard drives, we offer unparalleled security and confidence for our customers. Secure destructions can be viewed remotely from our secure web camera or destructions can be viewed onsite and certificates of destruction and recycling are generated.

Our recycling and destruction practices are in compliance with all federal, state and local regulations. Every hard drive that comes to the CEAR facility is physically destroyed so our customers can be sure that their information is not compromised. The facility is constantly monitored by video surveillance and we maintain an ISO 14001 certified system for optimal environmental integrity.

Have Electronics to Recycle?

Come Visit **California Electronic Asset
Recovery** For Your Sustainable
Electronic Waste Recycling Needs

**We Offer a Variety of Services for Business, Residents,
Government, Schools, & Non-Profits**

We Accept the following Items:

- Monitors, TV's & Laptops
- Computers & all Computer Accessories
- VCR & DVD Players & Recorders
- Stereo Equipment, Car Stereos & Speakers
- Video Cassette Players & Recorders
- Telephones, Cell Phones, Telecom Equipment & PDA's
- Printers, Copiers, Fax Machines & Laser Scanners
- Electronic Cables, Cords & Power Units
- Video Game Consoles
- Small Kitchen Appliances such as Microwaves, Mixers & Toasters
- Main Frame Computers
- Vacuums

****For a complete list of items please visit****

<http://cearinc.com/what-can-i-recycle>

What We Recycle

- TV's & Monitors
- PC/Laptop Computers
- Printers, Scanners & Keyboards
- Computer Cards and Components
- Telecommunications Equipment
- Chips & Components
- Storage Discs
- Printed Circuit Boards
- Fax Machines & Copiers
- Connectors/Cables
- CPU's, Servers & Main Frames
- UPS Power Supply Units
- Mini-Systems
- Cellular and Desk Phones
- Power Supply Units
- DAT/Beta/VHS Tapes
- Consumer Electronics
- And All Types of Electronics

Our Commitment

We are proud to guarantee the safe recycling of all electronic waste for our customers and our communities.

**Three end of life processing plants:
Irvine / Paramount / Hayward**

Certifications & Permits

● BAN e-Stewards

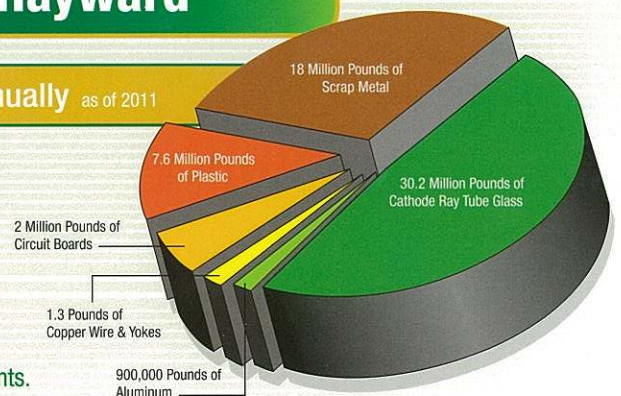

- Approved Collector /Recycler – California Electronic Waste Recovery Program
- Waste Wise Member
- ISRI Member

Total Volume Recycled Annually as of 2011

60 Million Pounds

Our customers include Fortune 500 companies; local, state & federal government; non-profits; school districts; commercial & industrial businesses & local residents.

Recycling & Services

Transportation

ERC owns and operates its own fleet of vehicles from small bobtail trucks and enclosed vans with lift gates to semi trailers.

Assured Destruction

- Certification of Recycling & Destruction
- Professional Liability Insurance
- Media and information containing devices destroyed and recycled following FACTA guidelines

Best Management Practices Compliance Training and Consulting

Collection Events

Over 98% of the electronic waste received is recycled

- ERC's processing methods insure highly marketable commodities
- All end markets are audited

Containers (Pricing and Availability Vary)

- Proprietary e-Racks Available 4' x 4' x 5'
- Other Containers available

SELECT MATERIAL

- Cell Phones**
Common cell phones collection points include wireless stores and e-waste recyclers. They can also be recycled via mail for money, and contain gold.
- Computer Peripherals - External**
Computer peripherals are anything that plugs into a CPU, such as a keyboard or mouse. They are often accepted by electronics recyclers.
- CRT Computer Monitors**
Cathode ray tube (CRT) screens contain lead and the complex recycling process limits the recycling market.
- CRT Televisions**
Cathode ray tube (CRT) screens contain lead and the complex recycling process limits the recycling market.
- Desktop Computers**
Electronics include recyclable plastics and valuable metal components. Be sure to erase any personal information.

Manufacturers Interstate Takback System

Computers for Classrooms, Inc.

A non-profit computer refurbisher, EIN: 68-0480598

History

In 1991 Computers for Classrooms was founded by Pat Furr, a former teacher and elected school district trustee of Chico Unified School District. Realizing that schools needed computers, Pat founded a volunteer program to refurbish donated computers and to place them in schools. Pat had been in the Master's Program for Computer Science at CSU Chico and decided to use her knowledge to assist schools and students. Over the years the award-winning program has expanded its services as the program has grown. The self-sustaining non-profit started in Pat's home and is now located in a 25,000 square foot modern facility with loading docks, pallet racking and the latest in security.

Mission

Computers for Classrooms is dedicated to providing professionally refurbished computer systems to schools and others lacking access to computers. California is in the bottom three states when comparing the ratio of students to computers. Students are twice as likely to attend college if they have a home computer. Public libraries cannot fill the need for access to technology. Libraries often have a waiting time of an hour or more to use a computer. Our students need to spend time on-line not in line.

We support Reuse if possible and responsible Recycling if not usable. The need for technology is great and CFC believes it is tragic to recycle computers that can be reused.

Professional Tools

R2 Certified CFC became the first non-profit worldwide to become a Certified R2 Recycler. The Federal Environmental Protection Agency recognizes the importance of supporting recyclers that are required to have annual third-party auditing. This assures the donor that the highest standards of data security, asset management and environmental protection are being followed.

Microsoft Registered Refurbisher (MRR) - As a MRR Computers for Classrooms is able to install licensed Microsoft Operating Systems and Office Suites on refurbished computers. CFC warranties all refurbished computers for one year.

Blancco Server - Blancco is an expensive hard drive wiping program that provides the highest level of security. Once wiped by Blancco the data cannot be recovered by any known technology. A record of the successful wipe is stored on our server in a file that cannot be edited. The report can be used in a court of law as proof of destruction. CFC further provides a Certification of Wipe or Destruction and backs the letter by a million dollar insurance policy. Server RAID drive arrays can be wiped by Blancco. Each drive is seen individually so that each server drive is wiped on its own.

Garner HD-3 Degausser - CFC uses the degausser to destroy any hard drives that are too small, defective or cannot be wiped completely. The degausser emits a burst of magnetic energy sufficient to completely wipe all stored data. The hard drive can no longer be used as the heads are magnetized but it can be recycled. The degausser is portable so that drives can be degaussed on site if desired. CFC can provide an audit trail by scanning the serial numbers and providing a spreadsheet with the disposition of each drive.

Tracer Plus – Handheld scanners and software provides an asset tracking report with serial numbers, make and model of donations and asset tags.

Secure Facilities and Procedures – CFC is housed in a modern concrete warehouse with 24/7 security, keypad entry, video cameras, locked trucks in transit and secure hard drive wiping room. What is your security policy? We will work to conform to your requirements.

Recipients

All donations are triaged by our staff and volunteers. Volunteers are able to earn a free computer after volunteering for 50 hours while learning job skills and working with a large variety of computers. The best computers go to schools. CFC has placed tens of thousands of computers in schools over the past 22 years.

Computers that are not used in schools can still be used by those who cannot afford new ones. Examples of recipients include:

- Low income families
- College students eligible for financial assistance
- Children eligible for free or reduced price lunch
- Those receiving Medi-Cal, Healthy Families, food stamps, section 8 housing
- Other non-profits
- Libraries
- Veterans
- Seniors – age 65 or older

Public	Warehouse hours 9 to 5 weekdays plus special drop-off events

CFC processed over one million pounds last year

References

References will be supplied upon request.

We would like to share the statement of Jeff Hunts who is the Manager of the California Electronic Waste Recycling Program upon hearing that CFC had received the R2 Certification:

As a founding participant in California's great e-waste experiment, CFC has demonstrated that reuse and recycling can co-exist and be both operationally successful and environmentally responsible.

Congratulations on such a noteworthy accomplishment!

Jeff Hunts, Manager

The Global Leader in Electronics Reuse and Recycling

Eliminating Your Data, Brand, Environmental & Compliance Risks

GLOBAL SOLUTIONS FOR A GLOBAL PROBLEM

As the global leader in electronics reuse and recycling, Sims Recycling Solutions helps solve the exponentially growing problem of end-of-life electronics on behalf of our customers and the environment worldwide.

Sims is the only single-source global processor of end-of-life electronics, providing you with a complete suite of services and expertise that includes time-tested guidance on comprehensive recycling programs, computer remarketing, data security laws and IT asset disposal regulations relevant to businesses and organizations around the globe.

2

SECURE DIGITAL DATA ERADICATION

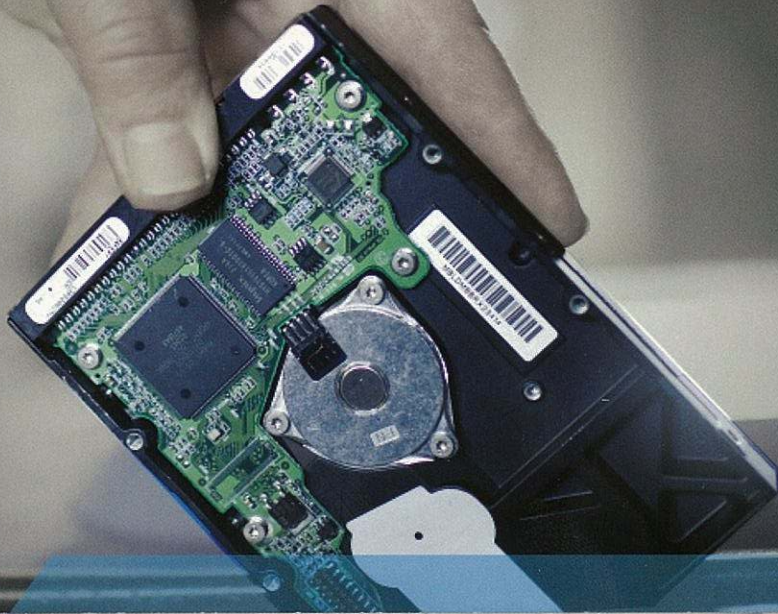

Your confidential data is vulnerable when equipment leaves your premises. Careless disposal of IT assets can lead to significant corporate liability and embarrassment. The damage from security breaches include identity theft, compromised intellectual property and exposed trade secrets, proprietary financial information and customer and employee records.

Sims' global network of secure facilities, with clearly defined and documented processes and complete data destruction services, safeguards against everything from theft of confidential information stored on hard drives to penalties for lack of compliance with regulatory requirements.

4

3

5

BRAND VALUE AND INTEGRITY PROTECTION

Your brand is your most valuable asset. Improper disposal of end-of-life IT assets can have devastating environmental, financial and legal consequences that irreparably damage your organization's reputation.

Sims provides the most secure asset management, tracking and destruction procedures in the reuse and recycling industry due to our self-contained, complete and comprehensive circle of security. Our globally-accredited protection solutions safeguard your confidential corporate information and your invaluable brand.

6

ENVIRONMENTAL LIABILITY PREVENTION

You care about the environment and want to avoid liability. Discarded electronics make up one of the fastest growing waste streams in the world. Mishandled e-waste can cause serious environmental damage and health risks to your community - and the global community.

Sims offers innovative recycling technologies, comprehensive hazardous materials management and R2 and EPSC RVQP certified facilities. Our transparent operations and rigorous audits of downstream partners help to protect you against the liability risks associated with e-disposal and help protect the world we live in.

COMPLETE, COMPLIANT & SUSTAINABLE RECYCLING

Sims is committed to fostering new ideas, exceeding expectations and achieving sustainability through responsible resource management. Because of that commitment, we have been the only recycler named as one of the top 100 most sustainable corporations at the World Economic Forum in Davos, Switzerland, for four consecutive years (2009, 2010, 2011 & 2012).

Sims has the expertise and infrastructure necessary to successfully navigate the complex maze of state, federal and international regulatory requirements, offering you a customized electronics reuse and recycling plan to protect your organization from any potential compliance risks.
