

# **AIRPORT ENVIRONMENTAL MANAGEMENT**

**04-08 October 2015**

**Abu Dhabi, UAE**

**Module 15: Environmental Planning and  
Implementation at an Airport – A Workshop**

## Module objectives

- To illustrate the key elements in planning for, and delivering environmental improvements through a delegate-centred worked example
- To identify specific objectives, targets and implementation requirements for an identified area of environmental improvement.
- To highlight the role of airport stakeholders in determining targets and ensuring delivery on planned improvements
- To establish a protocol for monitoring and illustrating performance improvements in a given area of airport environment impact.

## Exercise: Environmental Challenges for ADAC

- In groups, identify the main aspects and environmental impacts associated with all Abu Dhabi International Airport activities
- Establish priorities for ADAC over the next 2 and 10 years:
  - What is informing these priorities?
  - To what extent does addressing these priorities require working with other service partners and wider airport stakeholders?
  - Is it possible to rank the priorities?
- Make a brief presentation of your group conclusions to the whole workshop:
  - Reflect on commonalities and differences
  - Do the two different timescales present different challenges?
  - Identify a specific area/impact for further investigation

## Exercise: Environmental challenges for ADAC

In groups, for a given environmental priority area:

1. Plan improvement by identifying appropriate objectives and targets (think about timescales and possible indicators here)
2. Identify actions that will need to be undertaken to deliver on your improvement plan and highlight:
  - Implications for human resources (does the necessary expertise exist? Training needs? New recruitment?)
  - How will responsibilities be communicated to key individuals and divisions? Means of control?
3. What measures of improvement will be used and how might these be expected to change? (indicators)
4. Present your group to the whole workshop and argue your case for the allocation of resources to this environmental priority

**Any questions?**
